

# How fast does snow grow?

Notes: This difference in evaporation (sublimation) rates between water drops and ice changes with temperature. It is zero at 0 C, increases as the temperature decreases until about -12 C, then slowly decreases again. If the crystals are spheres, then the predicted mass after 3 minutes (starting with a 10  $\mu\text{m}$  diameter drop) is predicted to be the red dashed curve.

Instead, we measure the blue curve. Something different is happening between about -10 and -20 C.

# How fast does snow grow (II)?

Notes: After 10 minutes, we see another temperature region where the actual growth is faster, between about -4 and -8  $^{\circ}\text{C}$ .

What is happening here?

# How fast does snow grow (III)?

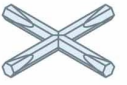

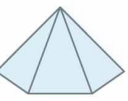

Notes: The answer is: the crystals are becoming very non-sphere-like at those temperatures. Near -6 C, long, narrow needle crystals form; and near -15 C, thin, flat star-like "dendrites" form. The "length along a-axis" is the diameter of the needle or star, the "length along c-axis" is the thickness in the other direction. In both cases, over 1 mm in 30 minutes.

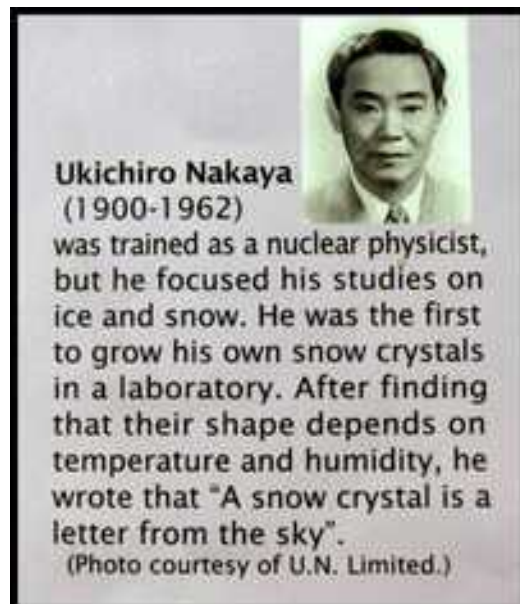

# What are the different snow shapes?

## 1) Columnar forms\*

From Kikuchi, Kameda, Higuchi, and Yamashita, 2013

								
C1a	C1b	C1c	C2a	C2b	C2c	C3a	C3b	C3c
								
C3d	C3e	C4a	C4b	C4c	C4d			

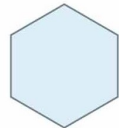

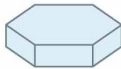

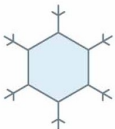

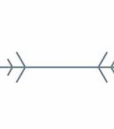

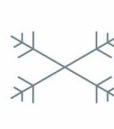

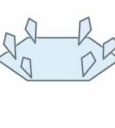

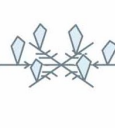

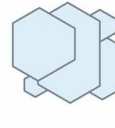

\*Symbol system based on Nakaya's original system

Notes: Here are those needle-like shapes. The ones in the top row are relatively common, as seen on the ground in mid-latitudes.

# What are the different snow shapes?

## 2) Planar (tabular) forms

								
						P1a	P1b	P1c
								
P2a	P2b	P3a	P3b	P3c	P4a	P4b	P4c	P4d
								
P4e	P4f	P4g	P5a	P5b	P5c	P5d	P5e	P5f
								
P6a	P6b	P6c	P6d	P7a	P7b	P8a	P8b	

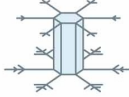

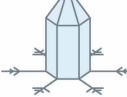

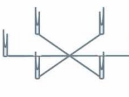

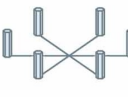

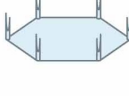

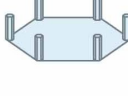

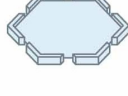

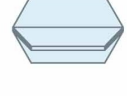

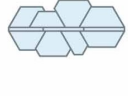

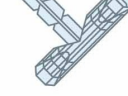

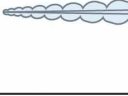

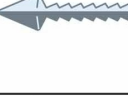

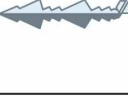

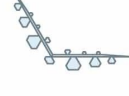

Notes: And here are the more dendrite-like shapes. The P2 to P4 are probably more commonly found. P5 types are thought to come about from the breaking apart of a P2-P4 type. The breaking may happen when crystals collide.

# What are the different snow shapes?

## 3) Columnar-planar (combo) forms

CP1a

								
CP1b	CP1c	CP2a	CP2b	CP2c	CP2d	CP3a	CP3b	CP3c
								
CP3d	CP3e	CP3f	CP4a	CP4b	CP4c	CP5a	CP6a	CP6b
								
CP6c	CP6d	CP6e	CP6f	CP6g	CP6h	CP7a	CP7b	CP7c
								
CP7d	CP7e	CP7f	CP7g	CP8a	CP8b	CP8c	CP8d	CP9a
								
CP9b	CP9c	CP9d	CP9e
